SUMMARY

GenAI Developer with 2.5 years at Hexaware Technologies shipping enterprise AI systems for a healthcare and insurance client: LLM-driven document intelligence, AI-assisted migration automation, and agentic workflows adopted by delivery teams. Owns problems end to end: interviewing stakeholders, deciding where AI genuinely helps, evaluating LLM output, and designing human-in-the-loop boundaries.

EXPERIENCE

Hexaware Technologies | GenAI Developer | Healthcare & Insurance Client May 2024 – Present

AI-Powered Collaboration Intelligence Platform

Worked with the client team and a Business Analyst to map the existing company-selection research workflow: time taken, the internal criteria behind collaboration decisions, and the evidence stakeholders need to verify recommendations.

Designed an automated company-research workflow using Tavily to identify relevant companies by country or drug and generate source-backed results from the top five web sources.

Built an iterative LLM validation workflow that refined initial outputs, verified extracted details against cited sources, and used PostgreSQL with pgvector and cosine similarity to compare generated documents with client-defined company-selection criteria.

Implemented a human-in-the-loop review mechanism that escalated outputs scoring below 70%, reducing research-document turnaround time from ~1 week to ~1 day while achieving ~70% accuracy in source-based testing.

FS/TS Generation Framework for Legacy SAP Code (Cursor)

Partnered with BAs and developers to assess undocumented legacy SAP code and evaluate custom-built versus Cursor-based approaches, selecting Cursor to avoid additional infrastructure and maintenance.

Built a Cursor-based documentation agent using rules, skills, agents, and hooks to generate template-compliant functional and technical specifications from legacy code, grounded exclusively in code evidence.

Refined the agent through BA and developer feedback, achieving ~80% accuracy in manual evaluations and team approval; published the CLI version to the company's EDP Agent Hub through a CI/CD pipeline.

Highspot → SharePoint Migration

Assessed the migration to decide what could be automated with Python; split it into a deterministic API path for files and an AI-assisted decision for pages that Highspot's API could not export.

Built batched migration services (Highspot API, Microsoft Graph) for 10K+ assets (PDFs, decks, Word, video, images), replicating metadata and hierarchy; ~85% of the workload migrates fully automatically.

Scraped structured pages with Playwright, then used an LLM with a purpose-built component knowledge base (RAG) to map content to the best-fit SharePoint Modern Page layouts; generated and validated strict page JSON with Pydantic before publishing. Pages land at 60–70% accuracy, with human review for missed components.

Used the SharePoint REST API to rebuild TreeView keyword columns so document search stays intact after migration.

Contract Intelligence Platform

Built and containerized an end-to-end contract-processing platform using Docker, processing 100+ contracts annually, extracting entities and metadata from digital and scanned PDFs, and uploading structured results to SharePoint, reducing manual review effort by ~80%.

Engineered OCR + vision-GPT pipelines with semantic chunking, embeddings and contextual retrieval; processed multiple PDFs concurrently with multiprocessing, cutting batch-processing time by ~30%.

Other GenAI POCs

Built a Snowflake GenAI Data Dictionary (Azure OpenAI + RAG) that generates business descriptions for enterprise data assets.

TECHNICAL SKILLS

LLMs & Agents: Azure OpenAI, GPT vision, LangGraph, LangChain, Cursor (rules, skills, agents, hooks), agentic workflows, tool calling, prompt & context engineering, spec-driven development, LLM Evaluation

RAG & Document AI: Embeddings, semantic chunking, contextual retrieval, FAISS, OCR, entity extraction

Evaluation & Reliability: DeepEval, LLM validation loops, Pydantic validation, prompt-level guardrails, human-in-the-loop

Backend & Automation: Python, FastAPI, multiprocessing, REST APIs, SQLite, Playwright, React/TypeScript, Microservices, Java

Integrations & DevOps: Microsoft Graph API, SharePoint REST API, Highspot API, Tavily, Snowflake, Azure, GitLab CI/CD, Apache Kafka, Docker

EDUCATION, AWARDS & CERTIFICATIONS

Silicon Institute of Technology, Orissa | B.Tech, Computer Science Engineering | CGPA 8.8 2019 – 2023

Awards: Pinnacle of the Quarter and Certificate of Appreciation, Hexaware Technologies (GenAI initiatives)

Certifications: Claude Certified Developer – Foundations; Claude Certified Associate – Foundations (Anthropic)
